

SAAB AUSTRALIA **DEPLOYABLE HEALTH CAPABILITY INDUSTRY ROADSHOW**

Opportunities for Australian industry

For thirty years, Saab Australia has been a leader and supporter of Australia's sovereign defence capability. Where possible we use local suppliers and subcontractors to develop Australian industry capability.

We invite you to this forum to learn about opportunities with Saab Australia's bid for JP2060 Phase 3 in 2017 when we will be engaging with companies who:

- Supply and support medical and dental equipment.
- Supply and support deployable field infrastructure; including soft and hard shelters, oxygen distribution, water and power distribution, portable lighting and related systems.
- Supply and support equipment related to environmental health; including air/water/soil/food analysis equipment, vector control equipment, radiological identification equipment, noise and vibration monitoring and related products.
- Undertake support roles for the program in key Defence locations around Australia.

Tuesday, 24 January 2017 9:30-11:30
