

Secure Search and Information Exchange

S2IX is an award-winning information management, secure collaboration and interoperability platform designed to provide modern-day warfighters with modern-day solutions. The solution was developed by Brisbane-based information management company, Myriad Technologies, to provide Defence and Security agencies with a data capability that addresses the complexity of tactical edge scenarios.

S2IX was specifically designed to drive decision superiority in deployed environments by providing decision-makers and operators with near-real-time information. It allows for secure data capture, management, and exchange across domains in any environment.

S2IX provides Defence and Security organisations with:

Dynamic and adaptive data sharing across agencies and/or domains.

Secure **data storage and record management** over zero-trust architecture.

A scalable data fabric capable of **integrating data from various systems**.

An interoperable solution **developed on existing network infrastructure**.

A technically mature, **commercial-off-the-shelf (COTS)** product ready for deployment now.

Highlighting S2IX in the Industry

Ongoing deployment on Royal Australian Navy warships.

Field testing with the Royal Netherlands Air Force, Helicopter Command.

Successful accreditation trials with NATO Federated Mission Networking (FMN).
