PRESS RELEASE

AIR360 obtains CASA Part 21G Production Certificate

Gold Coast based aviation consultancy and service provider AIR360 Pty Ltd has been approved as a CASA Part 21G production facility. The CASA Part 21G production certificate allows AIR360 to manufacture aircraft parts on a one off basis locally at the newly approved facility on the Gold Coast.

The approval puts AIR360 and sister company Aviation Engineers in a unique position whereby it can design and manufacture components for the aviation industry. Aviation Engineers holds a CASA Sub Part 21M design approval and currently provides engineering services to many local and national aircraft operators and aircraft owners. The new approval for AIR360 expands the service to allow aircraft parts to be manufactured and supplied with the approved design data.

Mr Jason Hazell, Director of AIR360 & Aviation Engineers said "We're really excited to have this approval as it means we can be the one stop shop for aircraft part design and manufacture. We've been working on this approval for several years and have invested a lot of time in writing what has been acknowledged as an industry leading quality system to support the manufacturing facility." Mr Hazell added AIR360 would like to thank the City of Gold Coast who has been very supportive of our growth plans. Initiatives like the growth accelerator programme and the export grants have really allowed us to develop our business and diversify into some growth areas.

Mr Paul Robbie, Senior Projects Engineer for AIR360 had the task of writing the manual and setting the new industry standard. Paul who has a wealth of experience in the aviation industry commented that the capability will complement the many skills on offer at AIR360. We have a great team with a track record in providing great services from manual writing to aircraft management services and now the manufacture of aircraft parts.

AIR360 provides industry consultancy and technical support from their Gold Coast head office and their office in the Melbourne Aviation Precinct at Tullamarine Airport.
